Course Name: Geographic Information System

Week 01 - Assignment 01 - (Jul-2026)

TYPE OF QUESTIONS: MCQ/MSQ

Number of questions: 10 **Total marks: 10x1= 10**

QUESTION 1

_____ analysis is descriptive and exploratory based on very large and complex data sets.

a) Real time
b) Spatial
c) Geographic
d) Satellite data

Answer: (b)

Detailed Solution:

Spatial analysis is descriptive and exploratory because GIS studies patterns, relationships, and trends using large spatial datasets such as maps, satellite imagery, and census information. It helps in understanding geographic phenomena and decision-making.

NPTEL

QUESTION 2

Majority of GIS definitions focus on data, software, hardware, _____ and _____.

a) Storage and management
b) Capture and model
c) Retrieval and display
d) Users and methods

Answer: (d)

Detailed Solution:

Most GIS definitions include users and methods because GIS is not only about computers and software; it also depends on skilled people and systematic procedures for collecting, analysing, and interpreting spatial data.

Course Name: Geographic Information System

Week 01 - Assignment 01 - (Jul-2026)

QUESTION 3

An excel sheet linked to map with village name, population, area, number of households etc. is an example of _____.

a) Social data
b) Attribute data
c) Census data
d) Location data

Answer: (b)

Detailed Solution:

An Excel sheet linked with map information such as village name, population, area, and households is called attribute data because it provides descriptive information about geographic features stored in the map.

QUESTION 4

Keyboard, monitor, cables, digitizers and scanners belong to _____.

a) GIS database
b) GIS software
c) GIS hardware
d) GIS tools

Answer: (c)

Detailed Solution:

Devices such as keyboards, monitors, scanners, digitizers, and cables are part of GIS hardware because they are the physical components required to input, process, display, and store GIS data.

QUESTION 5

Postal code is an example of _____.

a) Attribute data
b) Geographic data
c) Spatial data
d) Satellite data

NPTEL

Course Name: Geographic Information System

Week 01 - Assignment 01 - (Jul-2026)

Answer: (c)

Detailed Solution:

A postal code represents a specific geographic location or area, therefore it is considered an example of spatial data. Spatial data describes the position or location of features on Earth.

QUESTION 6

GIS was 1st introduced by _____, who is also considered as father of GIS.

a) Roger Tomlinson
b) Ian McHarg
c) George Everest
d) David Cowen

Answer: (a)

Detailed Solution:

Roger Tomlinson is known as the "Father of GIS" because he developed the first operational Geographic Information System, the Canada Geographic Information System (CGIS), in the 1960s.

NPTEL

QUESTION 7

Direct coordinate entry is an example for _____.

a) Data manipulation
b) Data analysis
c) Data input
d) Modelling

Answer: (c)

Detailed Solution:

Direct coordinate entry is a method of data input because geographic coordinates are entered directly into the GIS system to create or define spatial features.

Course Name: Geographic Information System

Week 01 - Assignment 01 - (Jul-2026)

QUESTION 8

Web GIS consists of _____ and _____.

a) Server and client
b) Coding and browser
c) Server and coding
d) Browser and client

Answer: (a)

Detailed Solution:

Web GIS works through a combination of a server and client. The server stores and processes GIS data, while the client (web browser or application) allows users to access and visualize the information online.

QUESTION 9

"Bhuvan" is the Indian Geo-platform to obtain

a) Satellite data
b) Rainfall data
c) Vector data
d) All of the above

Answer: (d)

Detailed Solution:

Bhuvan, developed by Indian Space Research Organisation, provides multiple types of geospatial information including satellite imagery, rainfall data, and vector layers. Therefore, the correct answer is All of the above.

QUESTION 10

Attribute data is managed and manipulated by _____.

a) DBMS
b) Metadata
c) Spatial editing
d) Data investigation

NPTEL

Course Name: Geographic Information System

Week 01 - Assignment 01 - (Jul-2026)

Answer: (a)

Detailed Solution:

Attribute data is managed using a DBMS (Database Management System) because DBMS organizes, stores, updates, and retrieves non-spatial information linked to geographic features in GIS.
