Course Name: Geographic Information System

Week 08 - Assignment 08 - (Jul-2026)

TYPE OF QUESTIONS: MCQ/MSQ

Number of questions: 10 **Total marks: 10x1= 10**

QUESTION 1

In a database table, rows are called _____ and columns are called _____.

a) Fields, records
b) Records, fields
c) Data, attributes
d) Attributes, tuples

Answer: (b)

Detailed Solution:

In a database, each row represents a record, while each column represents a field or attribute.

QUESTION 2

Which feature is mainly used to protect confidential database files?

a) Saving
b) Indexing
c) Encryption
d) Classification

Answer: (c)

Detailed Solution:

Encryption converts readable data into coded form to prevent unauthorized access.

QUESTION 3

SQL was originally developed by _____.

a) Microsoft
b) IBM
c) Oracle

NPTEL

Course Name: Geographic Information System

Week 08 - Assignment 08 - (Jul-2026)

d) Google

Answer: (b)

Detailed Solution:

Structured Query Language (SQL) was initially developed by IBM for managing relational databases.

QUESTION 4

The technique used to physically locate data on a disk efficiently is called _____.

a) Encryption
b) Normalization
c) Hashing
d) Classification

Answer: (c)

Detailed Solution:

Hashing uses a hash function to quickly locate and retrieve stored data from disk storage.

QUESTION 5

Storing geometric and attribute data in separate databases within GIS is known as _____.

a) Integrated system
b) Hybrid system
c) Spatial system
d) Logical system

Answer: (b)

Detailed Solution:

A hybrid GIS stores spatial and attribute information separately but links them together during analysis.

NPTEL

Course Name: Geographic Information System

Week 08 - Assignment 08 - (Jul-2026)

QUESTION 6

Which of the following is a logical operator used in databases?

a) +
b) ×
c) AND
d) sin

Answer: (c)

Detailed Solution:

AND is a logical operator used in database queries to combine conditions.

QUESTION 7

Which among the following is a statistical operation?

a) Addition
b) Multiplication
c) Maximum
d) Subtraction

Answer: (c)

Detailed Solution:

Maximum is a statistical operation used to determine the highest value within a dataset.

QUESTION 8

The process of grouping attributes according to user-defined limits is called _____.

a) Classification
b) Rasterization
c) Digitization
d) Encryption

Answer: (a)

Detailed Solution:

NPTEL

Course Name: Geographic Information System

Week 08 - Assignment 08 - (Jul-2026)

Classification groups data into categories based on specified attribute ranges or rules.

QUESTION 9

Which GIS feature ensures proper connection between vertices and edges during digitization?

a) Eraser
b) Snapping
c) Buffering
d) Overlay

Answer: (b)

Detailed Solution:

Snapping helps maintain topological consistency by connecting new features accurately to existing ones.

QUESTION 10

Overlay analysis in GIS can be performed on _____.

a) Raster data only
b) Vector data only
c) Both raster and vector data
d) Neither raster nor vector data

Answer: (c)

Detailed Solution:

Overlay operations combine multiple spatial datasets and can be applied to both raster and vector formats.
